SUMMARY

Software Engineer with 3 years of experience (including 6 months of backend development internship experience), building scalable backend systems using Node.js, Express.js, and TypeScript. Strong in RESTful API design, hybrid database architecture (PostgreSQL, MongoDB, Redis), and containerized deployment (Docker, AWS EC2/S3, CI/CD). Experienced owning backend architecture end-to-end, from system design through production deployment. Currently exploring applied AI as a growing area alongside backend engineering, with hands-on experimentation in RAG pipelines, vector databases, LLM integration, and multi-provider AI orchestration.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript

Backend: Node.js, Express.js, RESTful APIs, Microservices, Socket.io

Databases / ORM: PostgreSQL, MongoDB, Redis, Prisma, Sequelize, Mongoose

DevOps / Cloud: Docker, AWS (EC2, S3), CI/CD (GitHub Actions), Nginx, Turborepo

Architecture: Dependency Injection (Tsyringe), Layered Architecture, BullMQ / Redis Queues, JWT / RBAC

Applied AI: RAG pipelines, vector databases, multi-provider LLM orchestration, local model deployment (Ollama)

EXPERIENCE

Senior Software Engineer — Edzyme Tech Private Limited Jan 2026 – Present

- Promoted to own end-to-end backend architecture and system design for Kipi, an enterprise SaaS/ERP platform for educational institutes.
- Collaborate closely with the engineering team on technical decisions, code architecture, PR reviews, and deployment, maintaining API latency under 100ms at peak load.

Back End Developer — Edzyme Tech Private Limited Dec 2024 – Jan 2026

- Built core backend features for Kipi, including fee billing, wallet transactions, and academy management modules, with a hybrid PostgreSQL + MongoDB architecture.
- Built async processing pipelines (Redis, BullMQ) for notifications and PDF generation; integrated PhonePe payments and Socket.io real-time features (live notifications, in-app chat).

Junior Backend Developer — Stackdot Mar 2024 – Dec 2024

- Built and maintained scalable backend applications using Node.js and Express.js across multiple projects, working with both PostgreSQL and MongoDB based on project needs.
- Designed secure RESTful APIs with JWT-based authentication, role-based access control, and input validation.

Backend Developer Intern — Stackdot May 2023 – Oct 2023

- Designed and integrated RESTful APIs for frontend-backend communication using Node.js and Express.js, learning asynchronous, middleware, and event-driven architecture patterns.
- Worked with PostgreSQL and MongoDB across different projects, strengthening foundational skills in API design, database integration, and production development workflows.

KEY PROJECTS

Kipi — Enterprise SaaS/ERP Platform kipiapp.in

- Architected a hybrid PostgreSQL/MongoDB backend supporting fee billing, wallets, exams, and inventory; integrated PhonePe payments and a decoupled PDF-generation microservice.

Archrendr — Digital Asset E-Commerce Platform

- Gathered requirements and designed the backend system architecture independently, then built the full Node.js/TypeScript/PostgreSQL backend with Stripe billing, S3 asset delivery, and automated CI/CD.

NexusChat — Multi-Tenant RAG Platform

- Built a document chat platform with vector embeddings (pgvector), multi-provider AI orchestration with automatic failover, and local model fallback (Ollama).

Additional projects and full write-ups available at rushitrabadiya.github.io

EDUCATION

B.Tech, Computer Engineering — CHARUSAT 2021 – 2025

CGPA: 8.46

CERTIFICATIONS

Node.js, Express, MongoDB Bootcamp (Udemy) | JavaScript Algorithms and Data Structures (freeCodeCamp) | MongoDB Official Courses (Intro to MongoDB, MongoDB Atlas)
